3.2 Capital Adequacy

Risk Management Department carries out monitoring of capital adequacy ratio plans by monitoring the status of risk-weighted asset amounts and capital adequacy ratio on a monthly basis. In particular, Risk Management Department monitors that such events as a significant impact on the capital adequacy ratio have not been occurred. In cases where the required capital levels are reviewed due to changes in the strategic targets, risk profile and external business conditions, Risk Management Department examines the need of revising capital adequacy ratio plans as necessary.

The Bank applies Standardized Approach for credit risk weighted assets calculation as well as market risk weighted assets calculations. For operational risk, the Bank has applied Basic Indicator Approach (BIA) in calculation of operational risk weighted assets.

5. Liquidity Coverage Ratio

5.1 Liquidity Coverage Ratio and Disclosure Standard

In pursuant of BOT Circular number Sor.Nor.Sor. 2/2561: Liquidity Coverage Ratio Disclosure Standards, the Bank must disclose its Liquidity Coverage Ratio (LCR) under requirements for subsidiary of foreign banks whose financial years end on March 31st, the disclosure date is based on September 30th (quarter 2) and March 31st (quarter 4) for first and second half of the year respectively. The disclosed LCR, HQLA and Net COF are calculated by averaging outstanding at the end of each month within the reported quarter. The LCR is a measure of the Bank's ability to cover its own short-term obligated cash payment with its liquid assets under crisis situation. It is measured as a ratio of outstanding HQLA (High Quality Liquid Asset) over Net COF (Net Cash Outflow within 30 days under liquidity stressed scenario, as defined in BOT Circular number Sor.Nor.Sor. 9/2558: Guideline on Liquidity Ratio 'LCR') and subsequent update per BOT Circular number Sor.Nor.Sor. 4/2563: Re: Guidelines on Liquidity Coverage Ratio (LCR) (No.2). Per BOT's requirement, the Bank is required to sustain LCR at or above 100% during the reporting periods:

$$LCR = \frac{HQLA}{Net\ COF}$$

5.2 LCR Qualitative Disclosure

Average LCR during quarter ending in September 2023 is 189.4% and in June 2023 is 174.7%, which are above the level required by the Bank of Thailand at 100%. LCR is composed of two main components as follows:

High-quality Liquid Assets (HQLA)

HQLA refers to assets that are highly liquid (easily converted to cash without major loss of value), low risk, not volatile (value has low correlation to overall economic condition), and not encumbered. LCR recognizes HQLA in 3 levels; level 1, which is highest in quality and most liquid asset, and can be included without a limit or a haircut (such as Thai Government Bond and cash), level 2A and 2B which are relatively stable but not to the same degree as level 1 and are faced with larger haircut and maybe limited in amount that can be counted toward HQLA. the Bank of Thailand require compliance with Operational Requirement for HQLA which tests for the characteristics above, as well as the haircut to be applied for each type.

The Bank's average HQLA at the end of quarter ending in September 2023 is 13,995.7 MTHB, of which is wholly comprised of level 1 HQLA, which is diversified among assets such as bonds issued by Bank of Thailand and Ministry of Finance, and deposit at the Bank of Thailand or other major financial institutions.

Net Cash Outflow (Net COF)

Net Cash Outflow (Net COF) is the Bank's total obligated outflow within 30 calendar days from both on and off-balance sheet. It is calculated by Cash Outflow subtracted by the smaller between Cash Inflow and 75% of Cash Outflow. Each type of Cash Outflow and Inflow are subjected to runoff rate under stressed scenario per Bank of Thailand's regulation.

Average Net COF at the end of quarter ending in September 2023 is 7,461.3 MTHB. The major sources of Cash Outflow include deposit outflow, interbank borrowing, and net cash flow within the financial group. The major sources of Cash Inflow include loan repayment from interbank and customer. One of the Bank's major funding source is foreign currency loan from parent bank, which is then swapped to local currency to minimize market risk. The arising derivative, and net cash flow within the financial group are major contributor to Net COF.

Other Disclosure

Along with LCR, the Bank also employ industry standard tools to monitor and manage its liquidity risks, such as Liquidity Gap, Funding Concentration, monitoring of various liquidity indicators for internal and external factors, and will continuously improve its risk management tools and techniques to align with global best practice and the Bank's business plan to achieve safe and profitable business.
